

# Reports Everywhere

## Product Sheet

### Make reports and information available - anytime, anywhere

1. **In the office** - *Reports Everywhere* for Office facilitates the direct integration of reports into Outlook (e.g. as email attachment), PowerPoint (e.g. as picture in your presentation), Word and Excel.
2. **On your mobile device** - *Reports Everywhere* (for iOS, Android and Windows Phone) allows you to display and edit reports on your mobile device; you can email & print your report, refresh the report with changed parameters, etc.

**Mobile flexibility covering all scenarios** where reports are required, generated and/or processed on a regular basis. There are no content related restrictions – any report that is required can be displayed.

Including e.g. company-wide reports for the Management, CRM reports for the sales & marketing department, reports relating to inventory management, stock control, production etc.

**Benefit:** From the office as well as the mobile device - the reports can be generated rapidly & intuitively, requiring no intermediate steps pertaining your workflow. Up until now, one had to – in a rather intricate way - connect to a business server via a browser, search the folders for the report, insert parameters, generate the report and export the report until one was eventually able to open it.

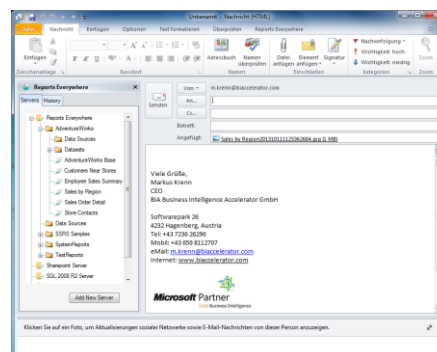

### Test it now, free of charge

Test versions of all mobile apps can be found in the respective app stores and are free of charge for the trial period. For the Office version, there is a free and non committal test version available on the product page [reportseverywhere.com](http://reportseverywhere.com).

### Highlights
